

Patternless Edger LE-1200

Patternless Edger LE-1200

A new standard is born

The NIDEK patternless edger LE series was born from the trusted, symbolic relationship with optical professionals and quickly grew to be the industry favorite. From the very first model, the core spirit of the LE series has blossomed through the years, and is now a sought-after standard.

Achieving 15% faster processing compared to conventional models, and equipped with a new tracer to accommodate a wide range of frames, the LE series is now reborn with new and refreshing technology in a gray color body.

Heavy-duty, durable mechanisms

Direct drive stepping motor and sintered-gear system provide a steady and reliable operation. Y-axis assembly with unique design delivers consistently high precision.

Chuck pressure stabilizer

Lens chucking assembly secures lens with appropriate, continuous and stable amount of pressure for grinding.

Shorter cycle time

The LE-1200 offers faster grinding capabilities. Short cycle time and high luster finish are the result of the latest design improvements.

A gentler processing mode keeps hydrophobic coated lenses perfectly on axis.

Lens edge polish is available for flat and bevel lenses.

Grooving & safety beveling

Fully-automatic grooving and safety beveling are performed in a smooth operation with a unique "multi-disk" arm. Specially designed wheels provide highly accurate grooving and safety beveling. With the LE-1200, even high base curve lenses attain a beautiful finish.

Mini bevel

Tailored mini bevel is ideal for thin metal eyewire frames, for example, aviator-style metal frames.

New multiple-frame tracer

New tracer provides accurate measurement of a wide array of frames including high-wrap style.

Simple "one-touch" demo lens tracing

Easy-load, magnetic pattern setting assembly provides single-step tracing operation.

Color-coded alert-LED for lens identification Integrated air duct for deodorization

Easy Shape Editor

Customized shapes can be created effortlessly with the Shape Editor screen. By simply changing the height of drill mount frames, progressive lens layout becomes much easier with this function.

Mini cup (optional)

Minimum 17.4 mm B dimension can be processed with the optional Mini cup set.

	Mini cup	Standard pliable cup
Flat edging	ø22.0 x 17.4	ø32.0 x 19.5
Bevel edging	ø23.0 x 18.4	ø33.0 x 21.0

Minimum size in mm (not including safety bevel)
